Comment #	PA(s)	Sector	Page #	Comment
NRDC-1	PG&E	Pub	General (no tracker)	- Include income information (e.g., by zip code or other manner) - Include more information re: end uses (see SDG&E p.81) - Understand public isn't in the potential, but see SDG&E p.80 for how to use the potential to inform the sector - P.21 – suggest partnering and expanding be a short/medium effort. Doesn't make sense to wait 4 years to launch a partnership with, for example, the Judicial Council. - P.26 – does PG&E have an idea that could be shared as an e.g., after "PG&E intends to launch new program models…"? Otherwise, it's hard for the reader to envision. - P.27 – comments at the CAEECC (e.g., 11/2 from DGS) noted that another barrier for OBF is *when* they receive the money. Would prefer it up front so they don't need to find the capital, even if it'll be paid back once the OBF loan is issued. - Similar to the other chapters, suggest a summary of how the goals at the beginning of the chapter align. It may be the table suggested in the other chapters or more of a 1-2 sentence summary of the connection between the previous information and why this intervention will help. Could be addressed by incorporating something like SDG&E p.96 for a mapping of how the strategies meet address the barriers (for all sectors). - P.32 – add SB 32
NRDC-2	PG&E	Pub	Metrics (tracker)	2nd metric has tracking by hard to reach, but there was no discussion of hard to reach in the chapter, even if the definition is in flux suggest adding more information/context. Such a discussion would align w/ NRDC's request for additional income/zip code information. - Understanding that this is a draft, there are some goals from p.4 that don't have metrics (e.g., increase public customer ability to meet their own climate change planning targets, increase operational efficiency, etc.). - The market level goal for 100% ZNE seems the same goal as just above it, but with a different metric. If these are in fact for the same thing, suggest making a #a and #b.
